DRIED MUSHROOMS - EUROPEAN UNION (EU) OVERVIEW

Product description

CN 0712.30 Mushrooms and truffles, dried, whole, cut sliced, broken or in powder, but not

SITC 056.13 further prepared.

Production

Statistics on the production of dried mushrooms within the EU are not available.

Picking of wild mushrooms is an important seasonal occupation, especially in France, Italy and Spain. However, some countries' national legislation imposes restrictions on the picking of wild mushrooms according to variety, quantity, geographical location etc.

European Union: Imports and exports (V = '000 US\$ Q = Tons)

Source: COM TRADE

Italy and France were the principal EU importers in 1995 followed by Germany and the United Kingdom. Other key European importers include Switzerland which ranked after Germany on this scale, and then Poland. Ireland showed the highest increase in imports over the five years, followed by Belgium / Luxembourg, the Netherlands and the United Kingdom (see Annex I and fig. 2).

Main origin of imports (=000 US\$ 1995)

Total imports 9 4,717 of which : China 25,001, TFYR Macedonia 14,970, France 11,321, Germany 9,480, Turkey 4,949, Pakistan 4,590, Romania 2,440, Bulgaria 2,019, Netherlands 1,926 and Italy 1,849. (See Annex II and fig. 4).

Market characteristics

The EU market for dried mushrooms is divided into two main categories; wild and cultivated. Within these two categories, the mushrooms can either be sun-dried, or naturally dehydrated (e.g. freeze-dried, air-dried etc.).

The bulk of imports dried wild mushrooms goes to the retail and catering sectors. The strong flavor of dried wild mushrooms, even stronger than that of the fresh product, enriches sauces, stuffings, seasonings etc. Most popular within this category are the Bolet (Boletus edulis) and the Morel (Morchella esculenta).

Dried mushrooms are also channelled into the food processing industry. Dried cultivated mushrooms (sliced, granulated or in powder) are most often used within this industry as raw materials for soups, frozen food and prepared meals (e.g. pizzas). Here, recent state-of-the-art research has allowed scientists to derive different flavors from mushrooms grown under nutrient-supplemented conditions. These help to enhance not only soups and gravies, but also products such as caramel flavorings and chicory coffee blends.

Italy, France and Germany are the principal importers of dried mushrooms within the EU (the concentration of consumption in Italy and France is focused in the retail sector, whereas in Germany, the bulk of dried mushrooms is used by the food processing industry). The Netherlands, which boasts a well-developed food industry, is also a fast-growing market, as is the United Kingdom.

In general, the demand for dried wild mushrooms in the retail sector is moderately price elastic, and thus causes a decrease in consumption in times where disposable income is limited. In this way, the sharp downturn of value per tonne imported into the EU in 1993 may be contributed to the effects of the recession that hit Europe in the early nineties, and the general upturn in imports in 1995 can be explained by preferential exchange rates in the United States (see Fig. 3).

Market access

The EU member states apply the Common Customs Tariff under which imports of dried mushrooms (wild or cultivated), are subject to the following treatment:

Rates Applied to Product 071230.00 (mushrooms and truffles)

| Product (NC) 07123000 | Sensitivity | MFN rate (1/1/97) | GSP rate (1/1/97) | GSP rate (1/1/97) graduated | MFN rate (1/1/97) | GSP rate (1/1/97) | GSP rate (1/1/97) graduated |
|-----------------------------|---|-------------------------|-------------------------|--------------------------------------|----------------------|-------------------------|--------------------------------------|
| | Very sensitive (15% reduction of MFN rate) | 14,9 | 12,6 | 13,7 | 14,4 | 12,2 | 13,3 |

Source: European Commission

Under the Uruguay Round, the duty rates applied will gradually decrease to 12.8% (ad valorem) by 1 July 2000.

Imports of dried mushrooms from ACP countries, Overseas Countries and Territories and Turkey are exempt from duties.

Being a product listed among those appearing in Annex V of GSP Agricultural regulation (Council Reg. No. 1256/96 of 20 June 1996, Official Journal of the European Communities Series L 160), the rates are suspended in their entirety for mushrooms and truffles originating from LD Cs (Least Developed Countries) listed in Annex IV and from countries listed in Annex V (Andean group and Central American Common Market Countries), as provided by Art 3 of the above-mentioned regulation.

Under the Renewed General System of Preferences (GSP), a depreciation mechanism is applied under articles 4 and 5 of the same regulation, according to which Chile, Mexico and Thailand are subject to a 50% reduction of the preferential margin as of 1 January 1997, and to a 100% reduction as of 1 January 1999 for mushroom and truffle products.

No mandatory EU regulations exists stipulating quality, sanitation and grading standards for dried mushrooms. Instead, national legislation is applied, and has become in recent years, increasingly stringent Codex 5A-1994 (FAO WHO) acts as a guideline for standards of quality in dried edible fungi.

Distribution channels

Distribution channels differ from country to country depending on the variety of dried mushroom and its end use.

Local production is mostly channelled through local markets and specialized stores. Imports of dried mushrooms are normally dispatched through wholesalers, or direct through specialized importers / packers who then channel them to the retail trade and the catering sector.

In recent years, the increasing concentration of substantial supermarket and hypermarket chains, as well as the increasing power of large multinational enterprises within the food industry, has increased the demand for regular supplies of vast quantities of high quality mushrooms. These large companies tend to buy direct from overseas and through other EU importers and producers.

Prices

Import prices in the EU vary according to the variety, origin, method of processing (sun-dried, hotair dried etc.) and the quality of the product

Among the wild varieties of mushrooms it is generally the Morel (*Morchella esculenta*) that commands the highest price, followed by the Cep (*Boletus edulis*). Dried wild mushrooms are significantly more expensive than cultivated ones, although the extent of this varies from country to country.

See the sections on Italy, France, Germany and Switzerland for an individual breakdown of prices in each country.

Packaging

Dried mushrooms are normally imported in bulk in 5 - 10 kg cartons, and are sealed and protected by inner bags of polyethylene. They are then sorted, in certain cases further processed, and eventually re-packed locally.

Dried mushrooms are mainly sold in transparent polyethylene plastic sachets containing 20-100g for the retailers, and 100 gr. to 1 kg for wholesalers. The use of the rm ovacuum forming and composite cans, as well as the more expensive option of PET jars has however become slightly more widespread, providing a more robust physical protection against the crushing and tearing of packaging. The transparency of the packaging is essential, not only so that buyers are able to verify that the product is not crushed or damaged, but also so that they may see what they are buying (thus acting to reassure first time consumers).

According to the EU Packaging Directive 83/189 EEC, each EU member will have to have introduced a fully operational national recycling scheme that attains a fixed quota, by June 2001. The structure of these national programs is left to the discrepancy of each country. Leading the way is France and Germany whose schemes demand that all packaging imported or produced in their country bears an eco-friendly symbol. The cost of this is placed upon the importer, and goes towards the collection and recycling of the packaging.

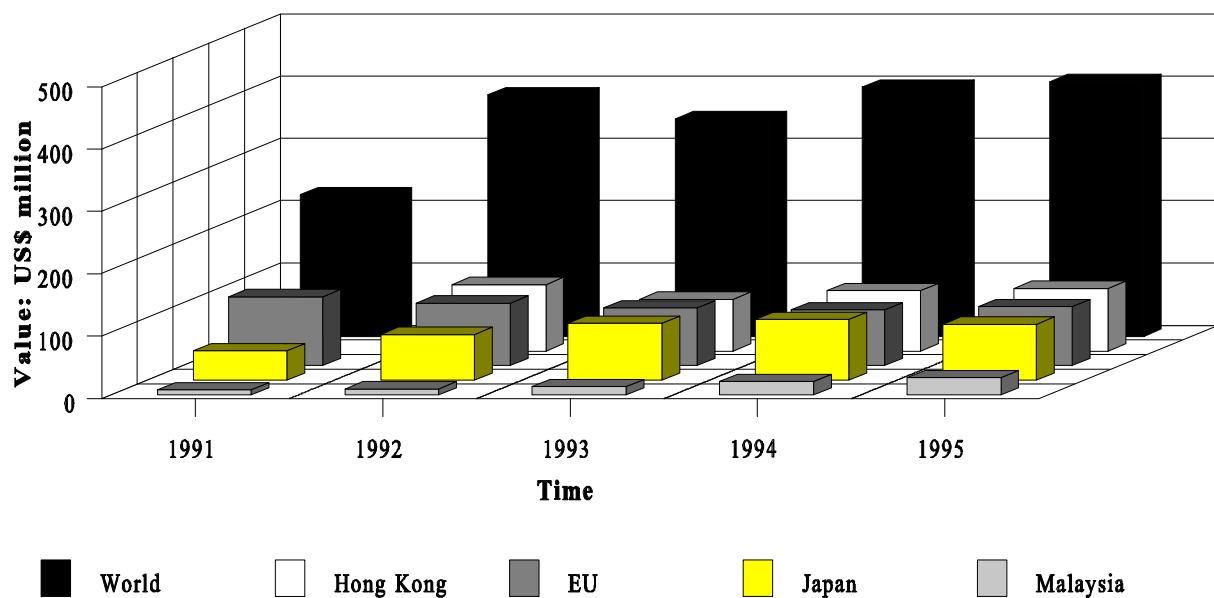

Trade promotion

Specialized trade fairs for food products can prove highly useful for establishing trade contacts. These fairs take place in the EU at different times of the year (the most important of these are listed in Annex III).

Market opportunities

As can be seen from fig. 1 (overleaf), the EU is one of the key importers of dried mushrooms in a world market that appears to be expanding. With its level of imports in terms of value relatively stable and increasing in 1995, the trend looks set to continue and further develop.

Figure 1.
Major World Importers of Dried Mushrooms 1991-1995 (V: US\$ million).

| | 1991 | 1992 | 1993 | 1994 | 1995 |
|-----------|---------|---------|---------|---------|---------|
| World | 227,380 | 387,898 | 349,331 | 399,640 | 408,755 |
| Hong Kong | * | 106,788 | 83,174 | 96,939 | 100,323 |
| EU | 110,690 | 100,350 | 92,358 | 89,286 | 94,417 |
| Japan | 47,066 | 73,297 | 97,484 | 97,855 | 89,881 |
| Malaysia | 7,638 | 9,544 | 13,110 | 21,284 | 27,282 |

Although the value per tonne of dried mushrooms imported into the EU suffered a slump in 1993, the European market has slowly been improving (See Fig. 3).

Up until 1994 Italy, the largest EU market for dried mushrooms, has shown signs of a decrease in its value / quantity ratio (even though the quantity of dried mushrooms imported has been increasing since 1992 it has been offset by a corresponding value that diminished up until 1994). On the other hand, France, Germany, the United Kingdom and the Netherlands, the next most lucrative markets, have shown promising increases in their value / quantity ratio since 1993 (See Annex I and Fig. 3) See the sections on Italy, France, Germany for an individual breakdown of market opportunities in each country.

An individual breakdown is also given for Switzerland which, although not a member of the European Union, is also a significant consumer of dried mushrooms. Its imports almost equalled that of Germany in 1995, a statistic that is remarkable given Switzerland's small size and relatively small population (see Annex I and fig.2).

Although 95% of the market is dominated by cultivated mushrooms, there remains an enormous potential in the market for wild mushrooms. This presents a great opportunity to many of the developing and least developed countries (LDCs) where an abundance of wild mushrooms can be found and dried at relatively little cost in the sun.

With the increasing level of national legislation applied to picking and selling of wild species of dried edible fungi, the market has become more open to exporters who are able to compete with traditional suppliers in meeting quality requirements and delivery terms.

DRIED MUSHROOMS - ITALY

Product description

CN 0712.30 Mushrooms and truffles, dried, whole, cut, sliced, broken or in powder, but not further prepared.

Production

Statistics on the Italian production of dried mushrooms are not available.

Recent regulations on the domestic picking and selling of fresh and conserved mushrooms in Italy, including dehydrated mushrooms are L. 352/93 and A.P.R. 376/95. Further details have been published by the Italian authorities in their Gazette Official (no. 376, 14 July 1995).

Seasonal picking of wild species for commercial use is a traditional activity, particularly in northern and central Italy. The greater share of this production is consumed fresh and only a small proportion is dried or processed. The Italian market for dried mushrooms depends heavily therefore on imports.

Italy: Imports and exports (V = 000 US\$ Q = Tons)

| | 1991 | | 1992 | | 1993 | | 1994 | | 1995 | |
|---------|--------|-------|--------|-------|--------|-------|--------|-------|--------|-------|
| | V | Q | V | Q | V | Q | V | Q | V | Q |
| Imports | 45,585 | 1,332 | 36,471 | 1,289 | 28,149 | 1,314 | 27,907 | 1,733 | 29,144 | 1,815 |
| Exports | 4,619 | 139 | 4,584 | 183 | 3,973 | 178 | 4,556 | 176 | 4,943 | 327 |

Source: COMTRADE

Main origin of imports (= 000 US\$ 1995)

Total imports 29,144, of which: TFYR Macedonia 12,467, China 7,464. Other suppliers include Romania 2,213, Bulgaria 1,411, Germany 938, and South Africa 877.

Market characteristics

Mushrooms have always played an important and traditional role in Italian cooking. They are widely used as an ingredient for typical Italian gourmet dishes such as Arisotto@ or Tagliatelle ai funghi porcini@ (rice or egg-milk pasta with boletus sauce) as well as for sauces and stuffings.

Most of the Italian market consists of the more expensive and highly prized wild varieties as opposed to the readily available and inexpensive fresh cultivated mushrooms. Dried cultivated mushrooms represent only a marginal proportion of the market.

At the retail level, the bulk of Italian imports of dried mushrooms is accounted for by the Cep (Boletus edulis). This mushroom, known as Aporcini,@ is by far the most popular and significant of all dried mushrooms in Italy, and enjoys a higher concentration of consumption in central Italy. Another popular, although much less widely used dried mushroom is the Chantarelle (Cantharellus cibarius). Demand also tends to peak during the colder months (from October to March).

A wide variety of dried wild mushrooms imported into Italy are sent to the food processing industry where they are pickled; popular wild mushrooms used in this way are:

- **Cep** (Boletus edulis)
- **Chantarelle** (Cantharellus cibarius)
- **Golden agaric / Imperial mushroom** (L=Amanita caesarea)
- **Honey mushroom** (Armillaria mellea)
- **Lactarius** (Lactarius deliciosus)

Pickled truffles are also widely consumed, especially in the North of Italy.

Market access

Italy applies the EU Common Customs Tariff (see Dried Mushrooms - EU Overview).

Distribution channels

The Italian market for dried mushrooms is supplied by a large number of small businesses/firms. Also within this market there exists a small handful of large producers/distributors among which the firms Bruschi Borgotaro, Merlini and Folci are the most important. In fact, on the other hand, are dealt with by specialized importers who then pass the product over to wholesalers/packers who sort, clean and pack the mushrooms before distributing them to large retail outlets. A small proportion of dried mushrooms go to the food processing industry.

Prices

The following are indicative prices:

Ceps (Boletus edulis) at import price: Lit 30,000 per Kg.

Ceps (Boletus edulis) at retail price: Lit 12,000-30,000 per 100 gr.

However, price varies according to the season, as well as the quality of the product (Italians will sometimes pay more than twice the price for a pack of Porcini labelled as ASuperior@). The type of processing also affects price, for example, hot-air-dried Ceps normally have a clearer and more marketable appearance, and can be even more expensive than sun-dried Ceps.

Packaging

The details given in ADried Mushrooms - EU Overview@ also apply to Italy.

It should be noted that some regional Italian regulations do not allow different kinds of mushrooms to be sold together in a single packet. According to Italian law, at least half of the package should be transparent and the products should be sold within 12 months of packing.

Market opportunities

With imports amounting to 1,815 tons, worth US\$ 29.144 million, Italy was the single largest EU importer of dried mushrooms in 1995, accounting for about 32% of all EU imports by quantity.

After the downturn in imports of dried mushrooms from 1991-1993, the Italian market has slowly begun to stabilize and grow. As the EU slowly moves away from the impact of the economic recession, the demand for gourmet food has slowly been increasing, although price consciousness remains relatively high. In Italy, where traditional cuisine has bred a high level of quality consciousness, prospects appear favorable for exporters with products of a constant high quality.

DRIED MUSHROOMS - FRANCE

Product description

CN 0712.30 Mushrooms and truffles, dried, whole, cut sliced, broken or in powder, but not

SITC 056.13 further prepared.

Production (Source : (CFC) Conféderation Française de la Conserves)

Production of dried wild forest mushrooms represented 488 tons of finished goods in 1996. Out of this, 99% was imported as raw material and then processed in France.

The bulk of dried cultivated mushrooms are grown and processed in France. Domestic statistics for this product however, are not available.

Seasonal picking of wild species for commercial use is a traditional activity, although in recent years it has been significantly restricted by law.

France: Imports and exports (V = =000 US\$ Q = Tons)

| | 1991 | | 1992 | | 1993 | | 1994 | | 1995 | | 1996 |
|---------|--------|-----|--------|-----|--------|-------|--------|-------|--------|-------|------|
| | V | Q | V | Q | V | Q | V | Q | V | Q | Q |
| Imports | 22,412 | 965 | 22,225 | 962 | 22,389 | 1,484 | 26,137 | 1,516 | 25,183 | 1,270 | 1175 |
| Exports | 11,886 | 355 | 11,948 | 399 | 12,508 | 468 | 13,316 | 1,784 | 15,298 | 1,262 | 1516 |

Source: COMTRADE and CFC

Main origin of imports (> 000 US\$ 1995)

Total imports 25,183, of which : China 7,335, Turkey 4,224, and Pakistan 3,972. Other suppliers include Germany 1,878, and TFYR Macedonia 1,741.

Market characteristics

Mushrooms play a principal part in France's traditional cuisine and are highly popular, from the inexpensive cultivated varieties such as *Champignons de Paris* (*Agaricus Hortensis*), to the more highly priced exotic wild varieties.

The mushrooms marketed in dried form are principally of the wild variety, of these the *Cep* (*Boletus edulis*) is the most widely consumed, followed by the Morel (*Marchella esculenta*) and the Bolet (*from the family Boletaceae*).

France is also a major consumer and importer of truffles. They are traditionally served with foie gras, or as an accompaniment to meat dishes.

Market access

France applies the EU Common Customs Tariff (see Dried Mushrooms - EU Overview).

Distribution channels

Almost all dried wild mushrooms are imported into France by specialized importers. Here, they are sorted, cleaned and packed, and the bulk sent off either directly, or through wholesale dealers, to the retail sector. The rest is sent off to be processed and used for industrial purposes.

Prices

The prices of wild dehydrated mushrooms (per kilo) are as follows:

- **Morel** (*Marchella esculenta*) - FF 800-1000
- **Cep** (*Boletus edulis*) - FF 150-450 (depending on quality)
- **Fairy Ring** (*Marasmius oreades*) - FF 250
- **Horns of Plenty** (*Craterellus cornucopioides*) - FF 300
- **Oyster mushrooms** (*Pleurotus ostreatus*), Wild mushroom, often cultivated - FF 120
- **Bolet** (*Species of Boletaceae*) - FF 60-100

Within this pattern, prices for dried mushrooms may fluctuate significantly depending on the variety, quality, type of processing and origin of the mushroom involved.

Packaging

The details given in AD Dried Mushrooms - EU Overview @ also apply to France.

Any packaged product produced or imported into France must pay towards its own recycling through the use of licence fees to bear the French Eco-Emballage symbol.

Market opportunities

With imports totaling 1,270 metric tons, worth US\$24.183 million, France was the EU's second largest importer of dried mushrooms in 1995, accounting for 26.5% of all EU imports. With exports amounting to the value of US\$15.298 million, France was also the EU's second largest exporter, representing approximately 29% of the EU's total exports.

Although France experienced a comparatively sharp upturn in imports of dried mushrooms in 1994 that has slowly decreased in 1995, their overall unit value per tonne imported has been rising steadily since 1993 and looks promising (See Figs. 2 and 3).

The demand for dried mushrooms is expected to remain relatively stable with an increase in demand for dried wild mushrooms. The market remains open to new exporters who are able to compete with traditional suppliers on quality and price.

DRIED MUSHROOMS - GERMANY

Product description

CN 0712.30 Mushrooms and truffles, dried, whole, cut, sliced, broken or in powder, but not further prepared.
SITC 056.13 further prepared.

Production

Statistics on German production of dried mushrooms are not available.

Practically all dried mushrooms consumed in Germany are sourced from imports. Local production comes mainly from very small private or local activities lacking significant commercial importance.

Germany: Imports and exports (V = 000 US\$ Q = Tons)

| | 1991 | | 1992 | | 1993 | | 1994 | | 1995 | |
|---------|--------|-------|--------|-------|--------|-------|--------|-------|--------|-------|
| | V | Q | V | Q | V | Q | V | Q | V | Q |
| Imports | 23,346 | 1,533 | 24,676 | 1,613 | 19,432 | 1,503 | 22,006 | 1,603 | 20,914 | 1,230 |
| Exports | 13,698 | 627 | 16,288 | 742 | 15,800 | 736 | 16,284 | 866 | 17,774 | 771 |

Source: COMTRADE

Main origin of imports (> 000 US\$ 1995)

Total imports 20,914, of which: China 7,659, France 5,784, TFYR Macedonia 736, Chile 702, Turkey 590, and Pakistan, 537.

Market characteristics

The bulk goes to the food processing industry to be made into soups, sauces, ready meals etc. A much smaller quantity goes to the retail and catering sectors.

The most widely consumed dried mushrooms by order of popularity are:

- **Chamignon Mushrooms** (*Ballota campestris*) - **Air dried**, cultivated mushroom, nearly 100% imported from China
- **Cep** (*Boletus edulis*) - wild mushroom, mainly imported from Eastern Europe countries and P.R. China
- **Butter Mushrooms** (*Boletus luteus*) - wild mushroom, mainly imported from Chile
- **Chamignon Mushrooms** (*Ballota campestris*) - **Freeze dried**, cultivated mushroom, mainly imported from P.R. China and France.

There are several other varieties of mushrooms imported in smaller quantities offering less commercial importance.

Dried wild mushrooms dominate the retail trade, the most popular of which are the Cep, Butter mushroom, Morel, Chantrelle, and more recently the Shiitake (*Lentinula edodes*). Dried wild mushrooms are also prominent in the catering sector and are in heavy demand by the food industry.

Market access

Germany applies the EU Common Customs Tariff (see Dried Mushrooms - EU Overview).

Distribution channels

The bulk of dried mushrooms is imported and marketed by specialized importers and/or processors, who add value through the sorting, selecting, cutting, sieving and cleaning of the product, thereby bringing the raw material to a tailor-made ingredient to be used by the food manufacturing industry.

Food processing enterprises also import directly especially from EU suppliers.

The remainder of imported dried mushrooms is sold to the retail sector.

Prices

The prices of the more popular varieties of mushrooms (per kilo) are as follows:

- **Chamignon mushrooms** (*Ballota campestris*) - cultivated mushroom, **air dried** - DM 15-18
- **Cep** (*Boletus edulis*) - wild mushroom - DM 23-45
- **Butter mushrooms** (*Boletus luteus*) - wild mushroom - DM 8-10
- **Chamignon mushrooms** (*Ballota campestris*) - **freeze dried** - DM 50-75.

Dried mushrooms are bought in bulk as they are channeled into the food processing industry.

Packaging

The details given in AD dried Mushrooms - EU Overview @ also apply to Germany.

Germany already has a well established packaging recycling system. Its Dual System (known for its green dot trademark ADer Grüne Punkt@) requires all retail packaging and distribution to go through the recycling process. The responsibility of this falls on the importer who pays a charge related to the weight of the product imported.

Market opportunities

With imports totaling 1,230 tons, to the value of US\$20.914 million, Germany is the third largest importer of dried mushrooms after Italy and France in 1995 (after having fallen from being the second largest EU importer after Italy in 1992 - see Annex I and fig. 2). With re-exports amounting to the value of US\$17.774 million, Germany accounted for 35.5% of the EU's total exports of dried mushrooms in 1995 (see Annex II).

Although demand in Germany has fluctuated since 1993, the overall value per tonne of dried mushrooms imported has shown a promising upturn of more than 4% since 1993 (see Fig. 3).

Due to the stringent regulations imposed by German law on sales of both fresh and dried locally grown wild mushrooms, the market continues to depend on imports.

DRIED MUSHROOMS - SWITZERLAND

Product description

CN 0712.30 Mushrooms and truffles, dried, whole, cut, sliced, broken or in powder, but not further prepared.
SITC 056.13

Production

Domestic production is at a low level and the market depends on imports.

Switzerland: Imports and exports ($V = \text{US\$} \times 10^3$; $Q = \text{Tons}$)

| | 1991 | | 1992 | | 1993 | | 1994 | | 1995 | |
|---------|--------|-----|-------|-----|--------|-----|--------|-----|--------|-----|
| | V | Q | V | Q | V | Q | V | Q | V | Q |
| Imports | 22,711 | 451 | 21867 | 414 | 21,624 | 467 | 22,449 | 560 | 20,866 | 567 |
| Exports | 1,689 | 26 | 4,682 | 66 | 2,580 | 34 | 2,690 | 36 | 2,994 | 78 |

Source: COMTRADE

According to annual Swiss foreign trade statistics, imports totalled 516 tonnes in 1996.

Main origin of imports (> 1000 US\$ 1995)

Total import 20,866, of which: Germany 4,447, China 3,831, Pakistan 2,647, Italy 1,201 and Turkey 897.

Market characteristics

Considering the large volume of imports for a relatively small population (5.7 million in 1995), Switzerland has the highest per capita consumption of dried mushrooms in Europe.

Switzerland is the second largest importer of Morels after France, with imports increasing more rapidly than those of other species and totalling approximately 100 tonnes per annum.

(For an individual breakdown of the popularity of different varieties of mushrooms in Switzerland, see the section on Prices).

Market access

The duty rate levied on imports of dried mushrooms into Switzerland is Sw Fr13.33 per 100 kg.

Under the GSP scheme, Switzerland's imports from developing countries are duty free, with the exception of China (charged 8.77 and 8.30 respectively). Imports are subject to phytosanitary rules.

Prices

The import prices of dried mushrooms (per kilo) are as follows (in order of popularity):

- **Cep** (*Boletus edulis*) - US\$18-35
- **Morel** (*Morchella esculenta*) - US\$9-12
- **Horns-of-Plenty** (*Craterellus cornucopioides*) - mainly imported from Hungary - US\$10
- **Jew's ear** (*Auricularia auricula-judae*) - US\$8-10
- **Shiitake** (*Lentinula edodes*) - US\$8-10
- **Champignon de Paris** (*Agaricus hortensis*) - cultivated mushroom - US\$8-10

Prices vary according to origin, quality, type of processing etc.

Distribution channels

The retail sector uses approximately 50% of dried mushroom imports, mainly derived directly from source. Around 40% of imports go to the catering sector and the food processing industries, with the remaining 10% used by specialized importers or for re-export.

Commercial practices

Orders are generally placed after approval of samples. Contracts stipulate conditions for dyeing, cleaning, grading, packaging, delivery, payments etc. Importers tend to favor suppliers with whom they have long standing business relations.

Packaging

The details given in Adried Mushrooms - EU Overview also apply to Switzerland.

Under the renewed Swiss Environmental Act, retailers and producers are obliged to pay a fee towards the recycling of their packaging.

Market opportunities

With imports totaling 567 tons and a value of US\$20.866 million in 1995, Switzerland ranks among the principal European importers of dried mushrooms after Italy, France and Germany and boasts a high and relatively stable level of imports (See fig. 2).

On top of this, Switzerland shows a staggering value per tonne of dried mushrooms imported ($VQ = 36.8\%$, 1995) although this ratio has been steadily decreasing over the 5-year period (See fig. 3). This is accounted for by the steady depreciation of the total value of dried mushrooms as more and more are imported.

Prospects are favorable for new suppliers from developing countries who are able to conform to the strict market requirements.
