Facts and introduction to Denmark

Introduction

Denmark is one of the Scandinavian countries (which also includes Sweden and Norway) and it is located in Northern Europe. In addition to Denmark itself, the kingdom also includes the Faroe Islands and Greenland.

Denmark consists of the peninsula of Jutland and approximately 406 islands, of which about 80 are inhabited. Of these, the largest and most densely populated are Zealand where the capital of Copenhagen is situated, Funen and the north of Jutland. The North Sea defines Denmark to the west, while the islands divide the Baltic from the Kattegat. The Danish islands are thus on the sea lane from the Baltic to the main oceans of the world and at the same time on the trade route from the Nordic countries to central Europe.

The form of government is a parliamentary democracy with a royal head of state. The system of production is capitalist (economic liberalism) with private ownership of businesses and production. The state and other public authorities, however, exercise a considerable regulatory control and provide comprehensive services for the citizens.

Denmark is a developed industrialised country. By international standards, the standard of living is high, and the differences between rich and poor are smaller than in many of the countries with which Denmark is traditionally compared.

Denmark is a member of the European Union. The proximity of Germany has traditionally orientated the country south in an economic and political sense, but close cooperation with Sweden, Norway, Finland and Iceland, with which Denmark enjoys a passport union, also ties Denmark to the North.

The country has a coastline totalling approximately 7300 km in all and a 68-km-long frontier with Germany. It is a distinctly low-lying country, the highest point being only 173 metres above sea level. The climate is temperate, and precipitation is sufficient to provide all the water needed.

Denmark is poor in mineral deposits. However, chalk for the production of cement is found in considerable quantities, and more oil and gas is extracted from the North Sea than is needed for home consumption.

The population stands at approximately 5.3 million, and the population density is about 120 per square kilometre. The language is Danish. However, the business language is English and to a lesser degree also German.

85% of the population live in towns. The greater Copenhagen region accounts for 1.8 million inhabitants. The second city is Århus (215,000 inhabitants). In addition the entire country is otherwise covered by a network of medium-sized towns.

Danish agriculture is highly developed, producing a considerable surplus of manufactured foods which are exported to other countries. Industrial production is very varied in relation to the size of the country. Among the commodities that have made Denmark known abroad are, in addition to agricultural produce, beer, medicines, furniture, shipping and products of the advanced metal industries.

Both agriculture and industry are highly effective. Agriculture and fisheries employ only 4%, and industry and construction 24% of the population. The remaining 72% are employed in the

service sector, 31% in the public sector and 41% in private business, including the traditional shipping trade.

Denmark is well provided with traffic systems. The road network is good everywhere in the country; railways and air links provide quick transport, and the islands are connected by ferries and a large number of bridges. Kastrup near Copenhagen is the largest international airport in the country and in Scandinavia and is at the same time a crossroads for air traffic to and from the other Scandinavian countries.

For more information regarding Denmark please see the website of the Ministry of Foreign Affairs at www.um.dk/english/danmark/danmarksbog

The Economy

The Danish economy is small and open, very dependent on trade with other countries and without any possibility of influencing international trading conditions or central economic factors, e.g. interest rates. The value of both exports and imports constitutes about 1/3 of GNP. About 2/3 of foreign trade is with other EU countries. Germany is clearly the most important bilateral trading partner, but Sweden, Great Britain, and Norway are also of significance. Outside Europe, Denmark trades especially with the USA and Japan.

On account of the great importance of foreign trade for the domestic economy, Denmark is very keen to deal freely in goods and services with other countries. Consequently, Denmark has joined collaborative organisations such as the EU, OECD and WTO and within the framework of these has striven actively to remove obstacles to free trade.

Since the Second World War, the composition of exports has undergone a great change. Industrial exports are greater than agricultural exports and play an ever-increasing role in the export of Danish products. The export of agricultural products used to dominate. Thus in the middle of the 1990s, industrial exports make up about 75% of total export values, while the share of agricultural exports is about 15%. Rather more than 1/3 of industrial exports consists of machines and instruments, while chemical products and industrially manufactured agricultural products, including tinned meat, account for approximately 11% and 10% respectively. After a considerable growth in the 1970s and 1980s, the export of services has stagnated in the first half of the 1990s.

Imports of raw materials and half-finished products, including energy, and of machines and other capital equipment accounts for just under 70% of total imports of the manufacturing industry. In the 1980s, Danish oil production rose considerably, and this has effected a steep fall in energy imports. The remaining just under 30% of imports generally speaking encompass consumer products, including cars. Denmark also has a considerable import of foreign services.

Trade structure/distribution networks

The wholesale and retail trades, which from the point of view of employment constitute the major element in the private service sector, have both undergone changes since the 1970s. This is partly because the traditional distinctions between the part sectors in a great many cases have been erased by an integration of retail, wholesale and in certain cases producer sectors (vertical integration). Moreover, both areas have been marked by mergers within the sector (horizontal integration).

Wholesale Trade

The wholesale trade accounts for approximately 70% of overall turnover in the trade sector. This share has been growing for a number of years, which is linked to the continued specialisation in the manufacturing sector, which brings with it more trade between the firms

and thus greater activity in the wholesale trade. The increase in activity has moreover resulted in a small growth in employment since the middle of the 1980s.

Since the middle of the 1980s, the wholesale trade has undergone a major restructuring in which a number of retail chains i.a. have established their own purchasing organisations or, like for instance Dansk Supermarket (consisting of a number of supermarket chains and mega stores) and the FDB (Cooperative Wholesale Society) group, have engaged in international cooperation. At the same time the major shopping chains increasingly buy direct from the producers. Turnover in the wholesale trade is completely dominated by the major firms in the sector. Thus, 4% of firms accounted for about 75% of the total turnover in 1995. In sharp contrast to this, almost half of the VAT-registered entities were small one-man businesses, which together accounted for less than 1% of total turnover.

Retail Trade

Despite a strong rise in turnover, employment in the retail trade fell since the 1980s. In all important respects decisions regarding product ranges still rest with the individual retailer, but with the increased integration with the wholesale trade, the wholesale sector has achieved greater influence. Changes in product ranges are seen partly in the shape of new goods, but also in shops in one sector taking over the range of goods sold by other sectors; this is known as compound trading. New types of shops have appeared in the form of supermarkets, low-price warehouses and discount stores, while the self-service system dominates entirely. Moreover a number of part functions have to a certain extent been taken over either by other areas in the turnover chain or by the consumers. As the result of an increasing proportion of turnover being made up of nation-wide branded goods, a good deal of - for instance - advertising is now in the hands of the producers.

To this must be added a new location pattern: In the older, central town areas and in the rural districts a large number of retail shops have been closed, while new shops have been collected in centres on the outskirts of the towns. From 1970 to the beginning of the 1990s, this trend has among other things resulted in a reduction in the number of shops selling everyday goods.

Although the structural changes in the retail trade have thus led to a concentration of turnover - 10% of the shops accounted for just under 80% of total turnover in 1995 - there is still a large number of small shops; thus about 1/3 of shops together accounted for only 1% of total retail turnover in 1995. Three out of four retail shops are one-man businesses, while the remainder are mainly limited companies or cooperative undertakings.

Practical Information

As an open economy and a member of the European Union, there are generally no restrictions on the importation of goods to Denmark. With regard to importing fruit and vegetables, there are a number of rules and regulations concerning quality standards which are described in Section 2.8: "Packaging and labelling".

Customs duties are levied on goods according to the Common External Tariff established within the Common Customs Code of the European Union. However, when importing from least developed countries (LDCs) access is duty-free and quota-free for all products.

The sales price of all goods and services in Denmark is subject to 25% VAT. In order to illustrate the composition of the sales price for the end-user in Denmark an example of the price components is described in Section 2.5: "Price".

Potential exporters can receive various advice from the commercial advisors attached to the Danish Embassies abroad. Often the embassies will refer to the Danish Import Promotion Office (DIPO) in Denmark. For a complete list of Danish representations abroad please see the

homepage of the Ministry of Foreign Affairs at www.um.dk and the Section 2.11: “Useful addresses”.

The Danish Market for Fruit and Vegetables

Product description

Within the nomenclature for statistics within the European Union chapters 7 and 8 describe the classification of vegetables and fruits respectively. The chapters include more than 200 different kinds of fruits and vegetables. In order to make this market guide more operational the guide has been limited to describe 3 areas:

- ?? fresh fruit and vegetables (i.e. goods that do not require any processing) that are not grown in Europe
- ?? fruit and vegetables that are grown within Europe, but can be sold in Europe off-season
- ?? fruit and vegetables that is already being imported to Denmark from developing countries (some however in very small quantities)

Examples of these 3 areas of goods are:

Fresh fruit and vegetables (i.e. goods that do not require any processing) that are not grown in Europe

- ?? FRESH COCONUTS
- ?? FRESH BANANAS
- ?? FRESH FIGS

Fruit and vegetables that are grown within Europe, but can be sold in Europe off-season

- ?? TABLE GRAPES
- ?? STRAWBERRIES
- ?? RASPBERRIES

Fruit and vegetables that is already being imported to Denmark from developing countries (some however in very small quantities)

- ?? GARLIC
- ?? CUCUMBERS
- ?? PEAS

For a full list of the 42 goods included in this market guide please see Annex 1.

The market size in Denmark for the fruit and vegetables included in this market brief is described in the tables below:

TABLE # 1: Market size in Denmark for vegetables

KN-code	Commodity	1998	Kilos	Increase	
			1999	2000	1999-2000

NB: The fact that the Netherlands has some imports of fresh passion fruit, carambola and pitahaya from Denmark is due to re-exporting from Denmark of goods imported from abroad.

Therefore additional statistics are enclosed in Annex 3 describing the countries from where these large quantities imported into the Netherlands and Germany are exported from.

The additional statistics thus illustrate that the import of passion fruit, carambola and pitahaya from the Netherlands to Denmark originally is exported from mainly Kenya, Zimbabwe and Malaysia (see above).

Exporters of these particular goods from Kenya, Zimbabwe and Malaysia could export directly to Denmark – circumventing the Netherlands – which would decrease the number of middlemen and could thus potentially increase the selling price from the country of origin. However, since goods purchased directly from Danish importers are often of smaller quantities, it is a prerequisite that the cost of transporting the specific goods is lower than the mark-ups of the middlemen.

A commodity such as bananas is also imported to a large degree through the Netherlands (and Germany), however a total of 15% of total imports of bananas is imported directly from the country of origin such as Cameroon, Panama, etc.

TABLE # 6: Import to Denmark by countries of export

KN-code	Commodity	Kilos	USD	Price/kilo	%

	Ecuador	4.196.539	1.785.568	0,43	6%
	Others countries	5.833.655	2.896.023	0,50	9%
	Total import	64.636.718	37.682.268	0,58	100%

KN-code	Commodity	Kilos	USD	Price/kilo	%
		2000	2000	2000	
0801 19 00	FRESH COCONUTS				
	Netherlands	110.801	51.591	0,47	7%
	Germany	407.744	333.864	0,82	28%
	Ivory Coast	24.400	6.591	0,27	2%
	Sri Lanka	85.501	84.205	0,98	6%
	Thailand	8.131	8.409	1,03	1%
	Indonesia	300.672	284.318	0,95	20%
	Singapore	48.284	38.977	0,81	3%
	Philippines	455.396	427.500	0,94	31%
	Others countries	38.298	41.136	1,07	3%
	Total import	1.479.227	1.276.591	0,86	100%

The second example above is coconuts where the majority of imports (63%) stem directly from the countries of origin, primarily Indonesia and the Philippines.

Market characteristics

According to a qualitative survey encompassing Danish importers of fresh fruit and vegetables, the main parameter for selling the goods on the Danish market is appearance, i.e. the way the fruit and vegetables look to the purchaser.

In recent years consumer preference has not shown any significant changes in tastes, except for a slight increase in general regarding purchase of most products. However, Danish consumers are generally interested in trying new fruits and vegetables. With an on-going Danish campaign to increase consumption of fruits and vegetables, consumption is expected to rise (please also see Section 2.10).

The general increase in consumption is especially the case for products such as beans, figs, pineapples, avocados, navel, lemons, table grapes, papayas, kiwifruit as described below:

TABLE # 7: Import to Denmark, 1998 - 2000

KN-code	Commodity	Kilos			Increase 1999-2000

Imports to Denmark have to follow guidelines specified by the Danish Directorate for Plants, which is part of the Danish Ministry of Food, Agriculture & Fisheries. Most important and generally for all fruits and vegetables the exporter must enclose for each shipment a "Certificate of Health" from the national authorities from the country of origin. Also the exporter should notice the requirements (EU and Danish) for the use of pesticides. In Denmark

the requirements are generally that there should be no trace of pesticides left on the fruit or vegetables. Further the Danish authorities “The Directorate of Plants” requires a Danish “Certificate of Health” filled in by the Danish importer. However, adhering to these last mentioned regulations will be the responsibility of the Danish importer. We must recommend the exporter to co-operate closely with the Danish importer as to the mentioned requirements due to the very complex and changing rules and regulations. It is only in the actual and specific case of export that the exporter and importer will be able to identify and follow the correct regulations. Please notice that there is for the moment no similar procedure for the 15 EU member states for import of fruit and vegetables. Negotiations are for the moment taking place to harmonize the procedures and regulations for all EU for import procedures.

Market access

The common organisation of the market in fruit and vegetables in the European Union has been established by EC Council Regulation 2200/96 of 28 October 1996. The regulation states that the following products which are to be supplied fresh to the consumer, are subject to standards. (see table 8)

The European Union has on a case-by-case basis approved these standards for a total of 35 fruits and vegetables as indicated in the table below. The 35 fruits and vegetables are mainly chosen as all the states in the European Union could agree to the standards. Please see Annex 4 for a description of the marketing standard for table grapes, the example covers the general requirements very well.

The web-page: www.maff.gov.uk/hort/hmi/common/standard/ describes the standards for each of the 35 fruits and vegetables mentioned.

TABLE # 8: Fruit and vegetables subject to EU marketing standards

Almonds	Apples and pears	Apricots
Artichokes	Asparagus	Aubergines
Avocados	Beans	Brussels sprouts
Cabbage	Carrots	Cauliflowers
Celery	Cherries	Citrus fruit
Courgettes	Cucumbers	Garlic
Hazelnuts	Kiwis	Leeks
Lettuce, curly and escarole chicory	Melons	Onions
Peaches and nectarines	Peas for shelling	Plums
Spinach	Strawberries	Sweet peppers
Table grapes	Tomatoes	Walnuts
Water melons	Witloof chicory	

In addition, the European Union has established Commission Regulation (EEC) 2251/92 of 29 July 1992 on quality inspection of fresh fruit and vegetables.

In the section on conformity checks of fruit and vegetables for importation into the Community from third countries (i.e. from countries outside the European Union) it is stated: “Before being admitted into Community territory, fruit and vegetables from third countries intended to be consumed fresh and for which there are common quality standards shall be subject to a conformity check to determine whether the goods meet the common quality standards or at least equivalent standards in the case of third countries other than European third countries or non-European third countries in the Mediterranean region”. The check comprises in particular:

- 1) an assessment of packaging and the presentation, 2) a check that the marking is correct and
- 3) a check that the products themselves are in conformity with the quality standards established for the products mentioned in Table 8.

Both EC Council Regulation 2200/96, Commission Regulation (EEC) 2251/92 and the Commission Regulations laying down marketing standards for each of the 35 goods specified above, can be accessed on the European Union website at http://europa.eu.int/eurex/en/lif/reg/en_register_036054.html

As a member of the European Union, Denmark is part of the EU customs union. However, since the tariffs are subject to change it is recommended to contact the Danish Customs Authorities at www.toldskat.dk

Import of fruit and vegetables to Denmark must comply with the regulation for maximum values for the content of residuals of a large number of pesticides. The EU has rules for the pesticides, which have been agreed to by the European Union. Further Denmark has an additional regulation for a number of pesticides. You importer will assist you with further information making you able to comply with the regulations.

Price level

A typical price consists of the following elements:

= Price for the consumer	100%
+ Mark-up	
+ Transport	
= Sales price to retailer	65-75%
+ Mark-up	
+ Transport	
= Sales price to wholesaler	50-60%
+ VAT	
+ Transport	
+ Mark-up	
= Import price to Denmark	40-50%
+ Duty	
+ Transport and insurance (Incoterms CIF)	
Sales price in exporting country	30%

NB: VAT is levied at each stage, but should only be counted once.

Distribution channels

As illustrated in the statistics the two main European gateways for fresh fruit and vegetables are the Netherlands and Germany; the Netherlands due to its large harbours and Germany due to its market size.

In Denmark the main importers of fresh fruit and vegetables are the following:

Brdr. Lembcke A/S

Lembcke was established in 1923 and has more than 350 employees. It is the most important Danish importer of fruit and vegetables from outside Europe. Lembcke's product range consists of several hundred products that are imported from all over the world. Lembcke has as a guiding principle to plan far into the future, thus focusing especially on the selection of suppliers (a grower must be able to engage in a long term relationship), the product range

(shopping habits and preferences are constantly developing) and on growing methods (more focus on environmentally sound methods).

For further information please see website at www.lembcke.dk

N.A.F. International A.m.b.a.

N.A.F. International is the buying alliance of European consumer co-ops and N.A.F. International thus represents the key to 7,600 European stores operated by leading, co-op retailers. N.A.F. International was created in 1918 to co-ordinate international co-op food buying. From that starting point it has developed into an international alliance. As a non-profit organisation it serves to keep down supply chain costs by facilitating direct contacts between members and suppliers worldwide. International trade, related services and negotiation of international agreements are core business areas for members' own labels and supplier labels.

For further information please see website at www.naf.dk

Dansk Supermarked A/S

Dansk Supermarked established its first store in 1960. Today it has more than 700 shops in Denmark, Germany, England and Poland with the Føtex, Bilka and Netto chains representing the bulk of the business. Turnover is approximately USD 5 billion and a total of 28.000 people are employed by the company.

For further information please see website at www.dansksupermarked.dk

EDEKA Danmark A/S

EDEKA is a nationwide trading company owned by independent grocers. EDEKA is partly owned by the German EDEKA ZENTRALE AG. EDEKA aims at delivering groceries at competitive prices to grocers and small supermarket chains.

For further information please see website at www.edeka.dk

GASA Odense A.m.b.a.

GASA ODENSE. is a sales co-operative selling a wide range of fresh fruit and vegetables from some 200 Danish producers. The city of Odense's geographical placing in Denmark makes GASA ODENSE a natural centre in Denmark. From here GASA ODENSE is - through the application of the most up-to-date information technology - serving all the important Danish super market chains and the fruit and vegetable trade with both Danish products and with fruit and vegetables from all over the world.

For further information please see website at www.gasa-odense.dk

Commercial practices

In the fruit and vegetable business – as well as in other businesses - a good working relationship is based on mutual understanding and trust. Often a relationship begins with a small export after sample products have proved satisfactory.

Provided the quality of the first order is equivalent to the quality of the sample, a business relationship has begun. It is essential for a new exporter that the first contacts are handled in a professional manner in order for the co-operation to flourish. After co-operating for a while the good relationship is consolidated by the importer placing additional orders with the exporter.

Payment terms are usually 30 days, and pre-payment or letters of credit are seldom used. Again a good relationship is based on trust and the commitment to a long-term partnership.

One of the major Danish importers (a non-profit purchasing organisation) deviates from the normal way of pricing. The organisation purchases the goods at a price to be determined later on (of course this procedure is only feasible when a good working relationship has been established). Instead of selling the product at the purchasing price + transport + mark-up, etc., the selling price minus the transport cost determines the purchasing price.

Transport terms depend on the size of the order and the commodity in question. For large quantities the transport is usually done by sea and for smaller and more perishable items such as papaya, passion fruit and beans, transport is always by air and these smaller quantities are often handled through the Netherlands and/or Germany.

Packaging and labelling

Packaging and labelling are essential for the products to reach Denmark in good condition. Fruit and vegetables perish easily if not properly packaged and shipped. For example fresh pineapples from Ghana and the Ivory Coast are always transported in open cartons in cooling containers by ship. The cartons should normally not weigh more than 15 kilos pr. carton.

Labels should contain as a minimum the country of origin; date, month and year of packaging and the name of the producer in order to ensure full traceability back to the grower.

Requirements in terms of packaging and labelling are subject to the marketing standards established by the European Union. The example presented below concerns the standards for sweet peppers.

PROVISIONS CONCERNING PRESENTATION

Uniformity

The contents of each package must be uniform and contain only sweet peppers of the same origin, variety or commercial type, quality, size (if sized) and, in the case of Class I, of appreciably the same degree of ripeness and colouring.

However, a mixture of sweet peppers of different colours is allowed as long as origin, commercial type, quality and size (if sized) are uniform and there is the same number of sweet peppers of each colour.

For packages of sweet peppers with a maximum weight of 1 kg, uniformity is only required with respect to origin and quality. Where sweet peppers of different colours are marketed, uniformity of origin is not required.

In the case of sized produce, elongated sweet peppers should be sufficiently uniform in length.

The visible part of the contents of the package must be representative of the entire contents.

Packaging

The sweet peppers must be packed in such a way as to protect the produce properly.

The materials used inside the package must be new, clean and of a quality such as to avoid causing any external or internal damage to the produce. The use of materials, particularly paper or stamps bearing trade specifications is allowed, provided the printing or labelling has been done with non-toxic ink or glue. Packages must be free of all foreign matter.

PROVISIONS CONCERNING MARKING

Each package must bear the following particulars, in letters grouped on the same side, legibly and indelibly marked, and visible from the outside:

Identification

Packer and/or dispatcher: Name and address or officially issued or accepted symbol. However, where a code (symbol) is used, the mention "packer and/or dispatcher" (or an equivalent abbreviation) must be placed close to this code (symbol).

Nature of produce

- ?? "Sweet peppers" and the colour or colours if the contents are not visible from the outside.
- ?? Commercial type ("elongated", "square blunt", "square tapering", "flat") or name of the variety if the contents are not visible from the outside.
- ?? "Peperoncini" or equivalent denomination where appropriate.

Origin of produce

- ?? Country of origin and, optionally, district where grown or national, regional or local place name.

Commercial specifications

- ?? - Class
- ?? - Size (if sized) expressed as minimum and maximum diameters or the mark "unsized" where appropriate
- ?? - Net weight or number of units (optional).

Official control mark (optional)

Sales promotion

There are a number of international trade fairs focusing especially on fruit and vegetables. These are:

- ?? AGF in Rotterdam, the Netherlands
- ?? SIAL in Paris, France; and
- ?? Fruit Logistica in Berlin, Germany

Market opportunities

Globalisation has resulted in an increasing interest for a broad variety of fruit and vegetables. The consumers like different kinds of fruits and vegetables and are especially prone to supplement their eating habits when being exposed to exotic foods when travelling abroad. The habits of Danish consumers are thus quite varied and many people like to eat all kinds of produce all year around. Danish consumers are thus presently buying as diverse products as asparagus from Peru, pineapples from Ghana, papayas from Malaysia and mangoes from Brazil.

In addition the Ministry of Food, Agriculture and Fisheries have recently launched a national campaign in Denmark to promote the consumption of fruit and vegetables. The campaign, which is called "6 a day", will run over the next 3 years and as the title indicates, it promotes eating at least 600 grams of fruit and vegetables every day. Research shows that Danes in general only consume 300 grams of fruit and vegetables a day, so if the campaign is successful, consumption should double within the next 3 years. Part of this increased consumption will of course be of imported fruit and vegetables.

The demand for ecological grown fruit and vegetables is increasing which has to be seen in connection with the long tradition for organic farming in Denmark. The effective control of the organic products has given the organic products a high degree of credibility. This is an important condition for the marketing of the fruit and vegetables. Trade is developed and the products are sold mainly through ordinary places of purchase such as supermarkets and smaller retailers. The size of the market for ecological grown fruit and vegetables is expanding and estimated to account for 10-15% of the total market. Examples of ecological products imported to Denmark and not grown in Denmark are e.g.: Coffee, Tea, Coco, Rice, Apricots, Lemons.

The requirements to production method etc. in order to classify a fruit or vegetable as ecological are in principle the same whether the product is imported, grown in Denmark or in one of the other EU countries.. Generally the demand to be recognised as an ecological grower are:

- ?? Only use natural fertilisers (e.g. manure from animal, chalk etc.)
- ?? Only use approved pesticides (e.g. Nicotiana tabacum, oils from plants and different plant extracts etc.)

A combination of Cobber, Calcium, mineral oils etc. can also be used.

As the Danish importer is responsible that the requirements are full filled, he can assist you to become an ecological grower, if interested.

However, since both legal requirements and consumer preferences regarding quality and appearance should be adhered to when exporting, fruit and vegetable growers in all countries need to be aware of the difficulties of exporting to Denmark.

A number of Danish importers thus have rigorous requirements before purchasing. A grower will typically have to comply with demands regarding usage of pesticides and fungicides and the Danish importer will often require access to look into company records documenting use of pesticides.

Furthermore, since fresh fruit and vegetables are perishable products, transportation becomes essential. Both the amount of time the transportation takes and the way the goods have been packaged determine whether or not the products can be sold on the Danish market or not. The Danish importer will thus prescribe the optimal temperature for the goods in transit in order to maintain quality. Upon arrival the importer will use advanced technical equipment to check whether or not the requirements have been adhered to.

Potential exporters interested in developing co-operation with Danish importers should thus pay close attention to growing methods, storage facilities, packaging and transport. Focus on everything related to maintaining a high and consistent quality. Some importers also have developed ethical guidelines for imports. This relates to issues such as workers welfare, etc.

Annex 5 details the development in imports for the 42 goods included in the market brief.

Annex 4: Commission Regulation (EC) No 2789/1999 of 22 December 1999 laying down the marketing standard for table grapes

The marketing standard for table grapes falling within CN code 0806 10 10:

STANDARD FOR TABLE GRAPES

I. DEFINITION OF PRODUCE

This standard applies to table grapes of varieties (cultivars) grown from Vitis vinifera L. to be supplied fresh to the consumer, table grapes for industrial processing being excluded.

II. PROVISIONS CONCERNING QUALITY

The purpose of the standard is to define the quality requirements for table grapes after preparation and packaging.

A. Minimum requirements

In all classes, subject to the special provisions for each class and the tolerances allowed, bunches and berries must be:

- sound; produce affected by rotting or deterioration such as to make it unfit for consumption is excluded,
- clean, practically free of any visible foreign matter,
- practically free from pests,
- practically free from damage caused by pests,
- free of abnormal external moisture,
- free of any foreign smell and/or taste.

In addition, berries must be:

- intact,
- well formed,
- normally developed.

Pigmentation due to sun is not a defect.

Bunches must have been carefully picked.

The table grapes must be sufficiently developed and display satisfactory ripeness. The development and condition of the table grapes must be such as to enable them:

- to withstand transport and handling, and
- to arrive in satisfactory condition at the place of destination.

B. Classification

The table grapes are classified into three classes defined below:

i) "Extra" class

Table grapes in this class must be of superior quality. In shape, development and colouring the bunches must be typical of the variety, allowing for the district in which they are grown, and have no defects. Berries must be firm, firmly attached, evenly spaced along the stalk and have their bloom virtually intact.

ii) Class I

Table grapes in this class must be of good quality. In shape, development and colouring the bunches must be typical of the variety, allowing for the district in which they are grown. Berries must be firm, firmly attached and, as far as possible, have their bloom intact. They may, however, be less evenly spaced along the stalk than in the "Extra" class.

The following slight defects, however; may be allowed, provided these do not affect the general appearance of the produce, the quality, the keeping quality, and presentation in the package:

- slight defects in shape,
- slight defects in colouring,
- very slight sun-scorch affecting the skin only.

iii) Class II

This class includes table grapes which do not qualify for inclusion in the higher classes, but satisfy the minimum requirements specified above.

The bunches may show slight defects in shape, development and colouring, provided these do not impair the essential characteristics of the variety, allowing for the district in which they are grown.

The berries must be sufficiently firm and sufficiently attached, and, where possible, still have their bloom. They may be less evenly spaced along the stalk than in Class I.

The following defects are allowed provided the table grapes retain their essential characteristics as regards the quality, the keeping quality and presentation:

- defects in shape,
- defects in colouring,
- slight sun-scorch affecting the skin only,
- slight bruising,
- slight skin defects.

III. PROVISIONS CONCERNING SIZING

Size is determined by the weight of the bunch.

Minimum size requirements per bunch are defined for table grapes grown under glass and for open-grown table grapes, large-berry or small-berry varieties respectively.

A list of varieties grown under glass and open-grown large-berry and small-berry varieties appears in the Appendix to this standard (which can be obtained at European Union website at:

http://europa.eu.int/eur-lex/en/lif/reg/en_register_036054.html

For all classes: in each small package not exceeding 1 kg net weight, one bunch below the required minimum weight is allowed to adjust the weight indicated, provided the bunch meet all other requirements for the specified class.

Where the name of the variety on the marking does not appear on the list in the Appendix hereto the minimum weight for large-berry varieties is required.

IV. PROVISIONS CONCERNING TOLERANCES

Tolerances in respect of quality and size shall be allowed in each package for produce not satisfying the requirements of the class indicated.

A. Quality tolerances

i) "Extra" class

5 % by weight of bunches not satisfying the requirements of the class, but meeting those for Class I or, exceptionally, coming within the tolerances of that class.

ii) Class I

10 % by weight of bunches not satisfying the requirements of the class, but meeting those of Class II or, exceptionally, coming within the tolerances for that class.

iii) Class II

10 % by weight of bunches satisfying neither the requirements of the class nor the minimum requirements, with the exception of produce affected by rotting or any other deterioration rendering it unfit for consumption.

B. Size tolerances

i) "Extra" Class and Class I

10 % by weight of bunches not satisfying the size requirements of the class; but meeting those of the class immediately below.

ii) Class II

10 % by weight of bunches not satisfying the size requirements of the class but weighing not less than 75 g.

V. PROVISIONS CONCERNING PRESENTATION

A. Uniformity

The contents of each package must be uniform and contain only bunches of the same origin, variety, quality and degree of ripeness.

For produce presented in small packages of a net weight not exceeding 1 kg, uniformity of variety and origin is not required.

In the case of the "Extra" Class, the bunches must be of more or less identical size and colouring.

The visible part of the contents of the package must be representative of the entire contents.

B. Packaging

The table grapes must be packed in such a way as to protect the produce properly. In the case of the "Extra" Class, the bunches must be packed in a single layer.

The materials used inside the package must be new, clean and of a quality such as to avoid causing any external or internal damage to the produce. The use of materials, particularly paper or stamps, bearing trade specifications is allowed provided the printing or labelling has been done with non-toxic ink or glue.

Packages must be free of all foreign matter, although a fragment of vine shoot no more than 5 cm in length may be left on the stem of the bunch as a form of special presentation.

VI. PROVISIONS CONCERNING MARKING

Each package must bear the following particulars in letters grouped on the same side, legibly and indelibly marked, and visible from the outside:

A. Identification

- Packer and/or dispatcher: Name and address or officially issued or accepted code mark. However, where a code (symbol) is used, the words "packer and/or dispatcher" (or an equivalent abbreviation) must appear close to this code (symbol).

B. Nature of produce

- "Table Grapes", if the contents are not visible from the outside,
- name of the variety or, where applicable, varieties.

C. Origin of produce

- Country (or, where applicable, countries) of origin and, optionally, district where grown, or national, regional or local place name.

D. Commercial specifications

- Class.

E. Official control mark (optional)
