## **1. Overview, summary**

This work arose in the course of Sippo's import promotion programme, whose range of services includes marketing and product advice, import-export promotion through sourcing and the provision of partners, participation at trade fairs, export marketing training with information events and trade information. The purpose of this report is to give foreign suppliers a general introduction and an initial assessment of the situation for the fruit and vegetable sector. Nevertheless, the information given must be verified in specific cases as regulations are subject to change without notice. No liability whatsoever can be accepted on the basis of information contained in this report.

In comparison with Europe, Switzerland has a small fruit and vegetable market. Nonetheless, it is well developed and is marked by supplies of exceptionally high quality. A significant share is imported. Fruit and vegetables that can traditionally be cultivated in Switzerland for natural reasons, are subject to complex import regulations. Whenever local supplies are sufficient, either no or only clearly defined imports in terms of volume are permitted. Where other products are concerned, in particular, bananas, pineapples, avocados, mangoes, citrus fruit, melons and other exotic fruit, imports are not limited by the government.

Switzerland also has a system for preferred customs tariffs (generalised system of preferences [GSP]). Many products from developing countries are subject to reduced customs tariffs or they can be imported duty-free.

Throughout almost the whole year, there is a surplus of supplies of practically all types of fruit and vegetables in Switzerland. Given such fierce competition, a supplier will only have a chance if he can stand out from previous suppliers on the basis of superior services. For fruit or vegetables cultivated in Switzerland, this may be foreign supplies outside the traditional harvest season. Quality is of major importance with regard to produce traded internationally. However, this not only refers to the produce itself but equally to packaging, adherence to deadlines and quantity agreements, uninterrupted ability to deliver, etc.

Swiss importers are usually keen on long-term relations with suppliers. New partners are tested with caution and consistency. It can take a certain amount of time before major orders are placed with a supplier.

## 2. The fruit and vegetable market

### 2.1 General aspects

Around 7m people live in Switzerland. The country is located in a culinary border area between the cuisines of France, Italy, Austria and Germany. In addition, international links boost demand for an exceptional variety of vegetables and fruits. A living standard that is above average enables the population to purchase top-quality produce throughout the year.

This work largely refers to fresh fruit and vegetables. The definition in the food regulation (LV) for this produce is listed below.

#### Fruit (Food regulation, art. 185, Definitions)

- 1 Fruit is unprocessed plant produce which is used for human consumption. A difference is made between the following kinds of fruit:
  - a. Pome fruits: apples, pears, quinces, etc.;
  - b. Drupes: apricots, cherries, peaches, plums, damsons, mirabelles, reineclaudes, etc.;
  - c. Berries: blackberries, strawberries, blueberries, raspberries, blackcurrants, gooseberries, grapes, etc.;
  - d. Citrus fruit (agrumen): grapefruits, mandarin oranges, clementines, oranges, lemons, etc.;
  - e. Exotic fruits: pineapples, bananas, dates, figs, mangoes, avocados, persimmons, lychees, pomegranates, etc.;
  - f. Hard-shelled fruit: chestnuts, peanuts, hazelnuts, coconuts, almonds, Brazil nuts, pistachios, walnuts, etc.
- 2 Dessert fruit is fruit which, when supplied to consumers, is clean and ripe and normally developed in shape, colour and internal properties and is free of blemishes that affect its value for consumption.
- 3 Fruit intended for preserves or cooking is fruit that cannot meet or no longer meets the demands made on dessert fruit but which is suitable for cooking, drying, and for other methods of preserving or usage. It may have external blemishes, may not be fully ripe or may be slightly over-ripe, be slightly affected in terms of freshness and keeping qualities, slightly shrunk and slightly devalued by unsuitable or excessive storage or by transport damage.
- 4 Fruit from ecological cultivation may have small external blemishes. The spirit of the demands of paragraphs 2 and 3 will apply.

#### Vegetables (Food regulation, article 188, Definition)

Vegetables are plants or parts of plants that are used for human consumption.

A difference is made between the following types of vegetables:

- a. Tuber and root vegetables: potatoes, carrots, celeriac, beetroot, salsify, kohlrabi, radishes, white radish, etc.;
- b. Stem vegetables: chard, rhubarb, asparagus, fennel, celery, etc.;
- c. Leaf vegetables: all kinds of cabbage, spinach, loose-leaf lettuce, crisphead lettuce and other leafy salads, Catalonia, etc.;
- d. Fruit-type vegetables: cucumbers, tomatoes, courgettes (zucchini), aubergines, melons, etc.;
- e. Legumes (fresh): beans, peas, snow peas, soya, lentils, etc.;
- f. Onions: all sorts of onions, garlic, etc.;
- g. Chicory: Belgian endives (Witloof), red and green cicorino, Zuckerhut, etc.;

h. Kitchen herbs.

## **2.2 Market structure**

The entire market can be structured as follows:

Demarcation by product

Purpose of consumption	<ul style="list-style-type: none"><li>• Fresh vegetables and fruit</li><li>• Preserves, deep-frozen products, concentrates, powdered, dried and mushy products</li></ul>
Method of cultivation	<ul style="list-style-type: none"><li>• Organic production</li><li>• Conventional production</li></ul>
Type	<ul style="list-style-type: none"><li>• Central European vegetables and fruit (controlled)</li><li>• Exotic vegetables and fruits (non-controlled)</li></ul>

## **2.3 Import possibilities**

In order to maintain a certain amount of production in Switzerland, there are certain import regulations that can differ in the course of the year. The most important legal bases are:

- Agricultural law (LwG) SR 910.1, articles 17-22
- Agricultural imports regulation (AEV) SR 916.01, articles 1-4, 10-15, 21-36
- Regulation governing the import and export of vegetables, fruit and garden produce (VEAGOG) SR 916.121.10 articles 1-9, 19-25

For imported products marked as organic produce:

- Regulation of 22 September 1997 on organic agriculture and the marking of organic produce and foodstuffs (Organic regulation) SR 910.18

Non-limited imports

Non-limited vegetables and fruits (q.v. annex 1) include, for example, asparagus (except for green asparagus), garlic, pickling cucumbers, mushrooms, almonds, hazelnuts, walnuts, chestnuts, bananas, dates, figs, pineapples, avocados, guavas, mangoes, oranges, mandarin oranges, lemons, grapefruit, melons, papayas, peaches, nectarines, various berries, kiwis, vanilla, cinnamon, various spices.

Limited imports

The import of the majority of types of fruit and vegetables is controlled and they may only be imported with a general import permit. Dependent on sales possibilities and domestic supplies, customs quota part quantities are released on a weekly basis during the control period. The purpose of these measures is to prevent excess competition with domestic sales during the harvesting season.

Imports of organic produce

Organic produce is subject to the same import conditions as conventionally cultivated agricultural produce. There are no separate import quotas. In terms of customs laws, no difference is made between the methods of cultivation. However, if the products are labelled as organic produce, they must meet the principles laid down in the organic regulation in terms of production and processing. Additionally, production must comply with the test procedures prescribed in the organic regulation.

## Customs quotas

Customs quotas are notified for fruit and vegetables subject to border protection. As a result of the GATT/WTO agreements, Switzerland must allow the import of a certain amount at the quota customs rate (KZA). This is based on the average imports of the years 1986/87/88.

Imports are subject to a two-phase system, as it is known. Each product is divided up into a controlled and into a non-controlled period of time. During the non-controlled phase, companies registered in Switzerland can import the corresponding product without any limitations on volume. In the controlled phase period, there are three different import possibilities:

### Supplementary quotas at the quota customs rate (KZA)

Domestic production cannot satisfy market demand. Supplementary quotas are permitted. However, these can only be exploited in terms of share by companies with a general import permit and import comparison figures.

### Imports at the non-quota customs rate (AKZA) code 1 (reduced customs duty)

Full supplies of the relevant domestic product. No quotas are granted. However, imports are nevertheless possible at the tariff mentioned.

### Imports at the non-quota customs rate (AKZA) (customs duty deposited in GATT)

If imports are made in addition to permitted supplementary quotas, the high customs duty has to be paid in return. Your competitiveness on the market is thus substantially limited.

### Crisphead salad as an example (per 100 kg gross)

Phase	Import possibility	Customs rate in CHF
Non-controlled	Free	10
Controlled	Supplementary quotas at the KZA	10
	Imports at the AKZA code 1 (reduced customs duty)	150
	Imports at the AKZA (customs duty deposited in GATT)	408

## Preferred customs tariffs (Generalised System of Preferences [GSP])

Preferential customs treatment allows APS, developing countries and territories to increase and to diversify their exports to Switzerland. Switzerland grants reduced customs duties (customs preferential scheme) for most agricultural produce. Often, no customs duty is charged on imports from least developed countries [LDC]. In principle, this applies to non-controlled products or to controlled products that can be imported within the quota.

## Value-added tax

Foodstuffs are subject to a reduced value-added tax rate (currently 2.3%) irrespective of their origin.

## 2.4 Trend

It is anticipated that the residential population will only increase slightly. The average age will increase. Although older people tend to consume fewer foodstuffs, they are considered to be more quality- and health-conscious.

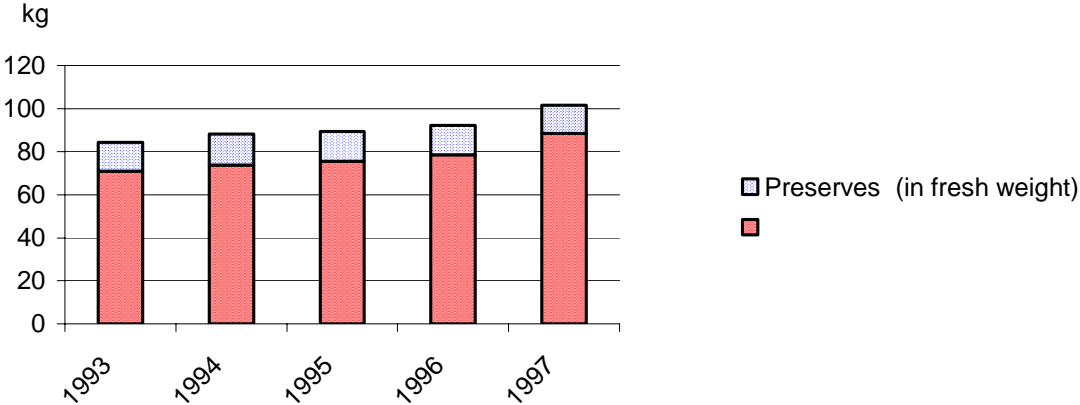

Only 13% of all consumer expenditure is spent on foodstuffs or beverages. For decades, the trend has been on the decline and this will also probably continue in future.

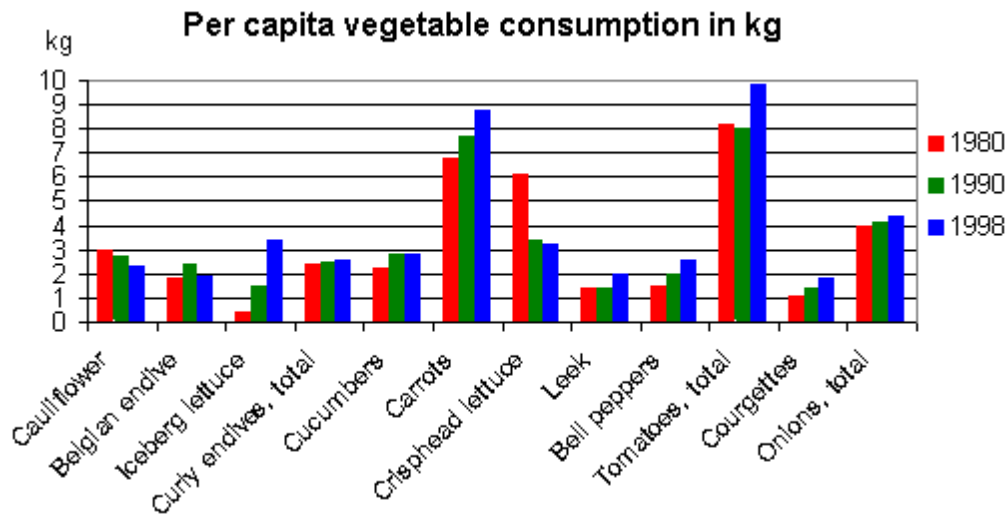

In Switzerland, there are around 3 million households. The number is on the increase, whereby there was an average of 2.3 persons per household in 1990. Small households prefer high-grade, pre-processed products and smaller packaging sizes. They are less price-conscious and more frequently eat in restaurants.

**Per capita fruit consumption in kg**

**Per capita vegetables consumption in kg**

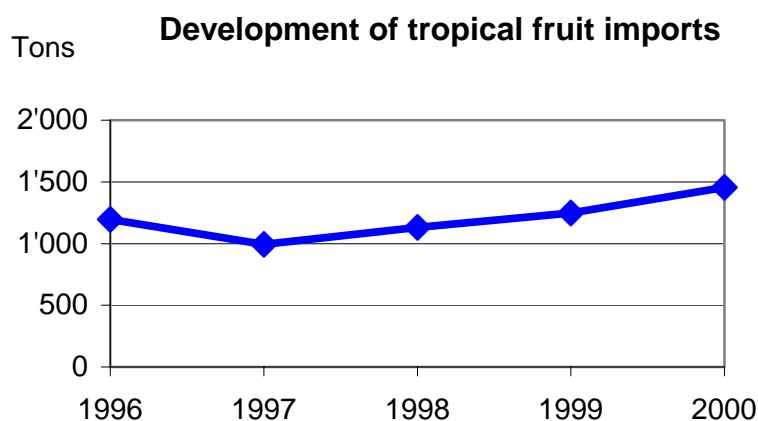

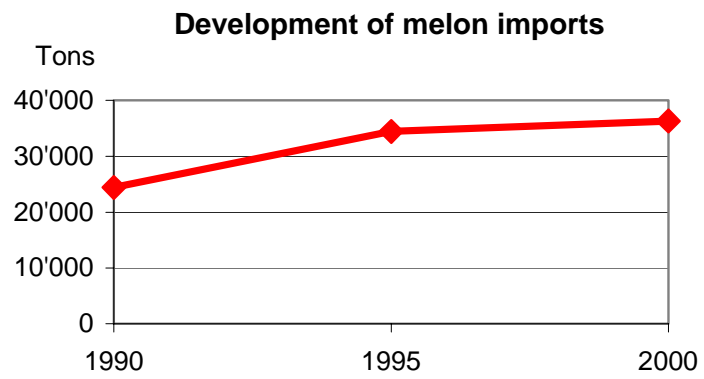

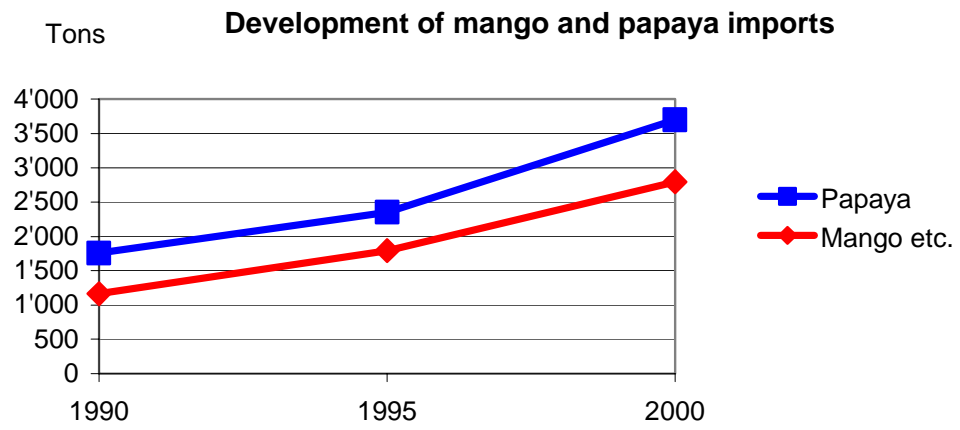

Per capita consumption of fruit and vegetables is increasing slightly at a high level.

## **2.5 Market prospects/chances and economic circumstances**

Overall consumption of fruit and vegetables will rise, particularly due to the slight growth in population and the increase in health awareness. Naturally produced products of high quality have particularly good chances of growth. Demand for individual products can be increased if they are offered outside the season valid in Switzerland. Particularly in the catering trade, exotic fruit is also being attributed with good chances of growth.

### 3. Imports

Fruit and vegetables with a value of almost one billion Swiss francs are imported annually into Switzerland.

08 Import of edible fruit; citrus fruit or melon peel

Countries	1990		1995		2000	
	Tons	CHF 1000	Tons	CHF 1000	Tons	CHF 1000

Eidg. Zollverwaltung, Abt. Aussenhandelsstatistik, 3003 Bern

Fruit imports 2000

## Fruit imports 1990 - 2000 (in 1000 of tons)

In terms of volume, around half of the vegetables and fruit consumed in Switzerland is imported. However, there are major differences according to production possibilities. For example, about one eighth of carrots, about two thirds of tomatoes and, in the case of pome fruits, dependent on harvest, between 5% and one quarter are imported, matched simultaneously by exports (3,494 tons of dessert apples and pears in 1999). Exotic fruits and vegetables are imported exclusively.

Vegetables and fruit are mainly imported from surrounding countries. Developments in recent years have shown that many countries with low import volumes and significant distances have disappeared as suppliers.

In 1990, for example, there were 34 countries as importers of tomatoes. In 1995, this figure had fallen to 30 and in 1999 there were only 17 countries. In the same period, volumes rose by about one quarter. In spite of a certain concentration on European supply countries, the example of tomatoes shows that a non-European supplier and a developing country that does not export mineral oil can become a significant supplier of vegetables for Switzerland.

The interesting point about this is that Morocco has become the largest supplier of tomatoes for Switzerland in terms of volume. Whereas in 1990 the share of imports was just short of 6%, it was as high as 12% in 1995. In 1999, Morocco was the largest supplier of tomatoes to Switzerland with a share of over 30%.

### 07 Import of vegetables, plants, roots and tubers for nutritional purposes

Countries	1990		1995		2000	
	Tons	CHF 1000	Tons	CHF 1000	Tons	CHF 1000
Total	201'617	100.0%	293'368	100.0%	269'935	100.0%

## Vegetable imports 2000

## Vegetable imports 1990 - 2000 (in 1000 of tons)

## 4. Importers

### 4.1 Basic aspects

A few hundred importers share the entire import of vegetables and fruit. Annex 2 lists the most important importers of vegetables and fruit that were allocated and claimed customs quota part quantities in 1999. It is striking that the quotas were only partially used. The customs quota part quantities allocated to the importers are only valid for a couple of days. They expire if not used. If a shortage is anticipated on the domestic market, customs quota part quantities are again allocated for the following days. It is thus obvious that the annual sum of individual customs quota part quantities is larger than the actual demand. Only in individual cases was the quantity allocated not exploited due to a lack of supplies.

The following structuring of the importers is intended to clarify the situation but makes no claim to comprehensiveness.

#### **4.2 Major distributors as importers**

Migros and Coop, the two major distributors that operate a national network of retail outlets, sell together more than half of the total volume of vegetables and fruit. They also operate simultaneously as importers. In addition, they also assume significant volumes from other importers.

Apart from Migros Cooperative, 8031 Zurich, which is probably the largest importer of all and Coop Switzerland AG, 4002 Basle, there are also other significant major distributors operating as importers (for example, Spar Handels AG, 9015 St. Gallen, Usego AG, 8604 Volketswil).

#### **4.3 Importers with a wide range of produce**

According to the publication of the allocation of customs quotas or of the effective imports, the companies Buonvincini AG, 8005 Zurich; Coop Switzerland AG, 4002 Basle; GBC Frutta Verdura Import SA, 6928 Manno TI; Gentile Gebr., 8752 Näfels; Migros Cooperative, 8031 Zurich; Schwab-Guillod AG, 3225 Müntschemier; Spavetti AG, 3210 Kerzers; Usego AG, 8604 Volketswil and Venzi + Paganini AG, 7503 Samedan are among the most important (at least 19 items with at least 2% of the controlled imports). Migros is also in the lead regarding range of products accompanied by significant volumes.

#### **4.4 Importers as specialists**

There are specialists who, in particular, offer some vegetables or kinds of fruit of domestic origin. To extend the duration of supplies or to increase their range of products, these only import a limited number of products.

Additionally, it is noticeable that some kinds of vegetables are mainly only imported by a few. Typical examples are: Green asparagus (Giovanelli Fruchtimport AG, 8502 Frauenfeld; Coop Switzerland, 4002 Basle; Migros Cooperative, 8031 Zurich; Bettio AG, 8840 Einsiedeln), lambs' lettuce (Spavetti AG, 3210 Kerzers; Schwab-Guillod AG, 3225 Müntschemier; Migros Cooperative, 8031 Zurich; AG für Fruchtehandel, 4051 Basle) or onions (Steffen-Ris, 3427 Utzenstorf)

#### **4.5 Processors as importers**

Dependent on the market situation, processing companies are also present as importers of fresh products for further processing. For example, Ditzler Louis AG, 4313 Möhlin for Brussels sprouts, broccoli and courgettes (zucchini) in the deep-freeze sector; Frigemo Produktionsbetrieb, 5507 Mellingen for Brussels sprouts, broccoli, kohlrabi, beetroot and celeriac or Gastro-Star, 8108 Dällikon for salads such as curly endives and chicorino salad.

Pre-packaged frozen products are also imported. Alongside the major distributors, the importers are mainly processing operators such as Ditzler Louis AG, 4313 Möhlin; Frigemo AG, 2088 Cressier; Hilcona AG, 9494 Schaan and Nestlé Switzerland AG, 9400 Rorschach.

However, there are also companies from the beverage industry that handle imports.

#### **4.6 Importers' addresses**

Q.v. annex 3

## **5. Importers' requirements and expectations**

### **5.1 *Produce and market skills***

With very few exceptions, importers only import top-grade products. Producers are expected to cultivate the optimum sorts for the Swiss market. The production methods must be selected to ensure that constant volumes of the highest quality, clean and ripe, can be marketed over the longest period possible. Their properties in terms of colour, shape and possibly preparation (pineapples, tomatoes on the vine) must meet consumers' high demands. Fruit and vegetable suppliers are expected to be familiar with general domestic requirements.

Importer-specific requirements must be negotiated. These agreements are binding in principle. Swiss trading principles apply in the absence of any corresponding agreements. EU standards apply if these are also missing. The vegetable manual (publisher: VSGP, Berne) lists a wealth of information on the choice of type, weed control, pesticides in IP and organic cultivation, a list of requirements for IP production, composting, costing, import regulation, addresses and information on additive companies and suppliers. The Swiss Fruit Association, 6305 Zug is responsible for fruit.

## 5.2 Legal regulations

Foodstuffs are subject to Swiss laws and regulations irrespective of whether they are produced by the domestic market or imported.

Title	Systematic order (SR)	Topic
<i>Law governing foodstuffs</i> <i>Food regulation</i>	SR 817.0 SR 817.02	Basis of foodstuff legislation
<i>Regulation governing additives</i> (Regulation governing additives and ingredients in foodstuffs)	SR 817.021.23	Lays down the maximum permissible concentrations for pesticides and growth regulators, heavy metals, pharmacological active agents, microbial toxins, radionucleids, nitrates and nitrites
<i>Regulation governing additives</i> (Regulation governing the additives permitted in foodstuffs)	SR 817.021.22	Positive list of approved substances and preparations, application list of various additives with the maximum permissible amounts, regulates the declaration of additives
<i>Hygiene regulation</i> (Regulation governing the hygienic-microorganic demands on foodstuffs, objects, rooms and staff)	SR 817.051	Lays down tolerance figures for micro-organisms in foodstuffs and drinking water
<i>Regulation governing nutrition</i>	SR 817.021.55	Regulates the nutritional value labelling (information on the energy value and content of nutrients) of foodstuffs
<i>Regulation governing the declaration of country of production of raw materials</i>	SR 817.021.51	Lays down that, apart from the country of production of a foodstuff, that of the individual raw materials must also be stated
<i>Declaration regulation</i> (Regulation governing the measuring and the declaring of quantities of goods in trade and on the market)	SR 817.051	Regulates details of quantities (weight, volume, etc.) of foodstuffs and the corresponding declaration for open sale and pre-prepared packages

## 5.3 Importers' specific expectations

In Switzerland, there is an oversupply of almost all fruit and vegetables throughout the year. Given such fierce competition, a supplier will only have a chance if he can stand out from previous suppliers on the basis of superior services. Importers set maximum store by the reliability of their suppliers.

### *Adherence to deadlines*

As it is a matter of perishable goods, on the one hand, and, on the other hand, the fact that the part quantities allocated are only valid for a few days, adherence to deadlines is also very important. Sales promotion measures are often scheduled prior to harvesting and publications commissioned. Major losses result from products not reaching shops in time and in the desired quality.

### *Residues/contamination*

Under no circumstances may foodstuffs contain forbidden substances or exceed the maximum permissible values. However, the extent of damage is enormous if such products nevertheless

are marketed and the existence of these substances can be substantiated. Apart from fines and the destruction of the products, boycotts of the products and retail chains concerned are also possible. Due to the increase in responsibility regarding product liability in recent years, the route from production (plantation) to shop should be transparent. As a consequence, importers tend to cooperate with a small number of efficient partners who can offer a maximum number of products throughout the year if possible.

#### *Packaging/product designation*

Some importers wish to have the vegetables or fruit already at the stage that they can be put straight onto the shelves without any further processing. The detailed requirements must be discussed with the customer in this case.

For imports to Switzerland, attention must also be paid to the fact that Switzerland enforces weight duty on the entire weight (gross weight). This means that the same customs duty must be paid for the packaging as for the main product.

#### *Prices*

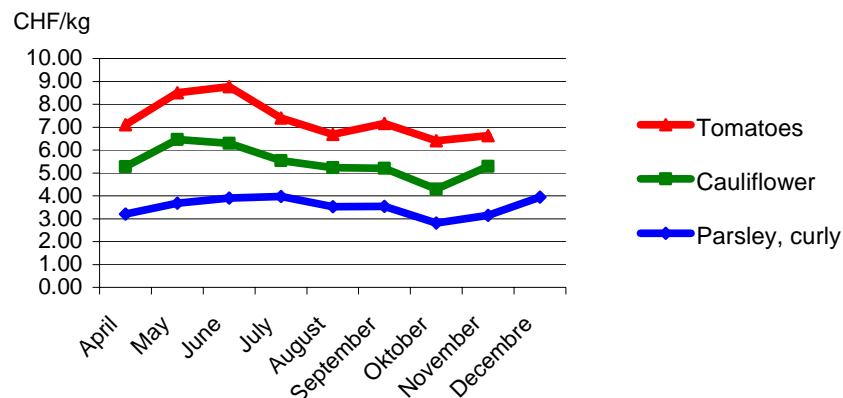

Price is only a decisive criterion if several suppliers adhere to the desired quality and keep to deadlines in the long term. In general, a low price can neither compensate for a lack of quality nor delayed deliveries.

Prices can fluctuate sharply in the course of the year.

#### *Refusal to accept/rejection*

If agreements are not adhered to, importers can refuse to accept the product. Irrespective of whether the damage is the result of transport or whether it has occurred at the production stage, it may lead to rejection. This is particularly the case when quality or deadlines are not adhered to or if the products contain residues: a situation that is unpleasant for all involved.

**Prices carriage paid wholesaler 1999**

#### *"Social code"*

Increasing importance is also being placed on "fair" treatment. For example, workers on plantations are expected to receive fair wages and social benefits and there should not be any employment of children. This also explains the success of the *Max Havelaar foundation*.
